ROAD TRANSPORT, A KEY PART OF LNG ACCESSIBILITY

Transporting Liquefied Natural Gas by road has proven to be one of the most efficient ways of getting small quantities of LNG to remote off-grid destinations. It's also the perfect solution for initiating the expansion of the LNG as fuel market.

Elengy has been operating LNG terminals since 1965. Our terminals are located in Montoir-de-Bretagne and Fos-sur-Mer. We're playing an important part in the LNG fuel boom, as well

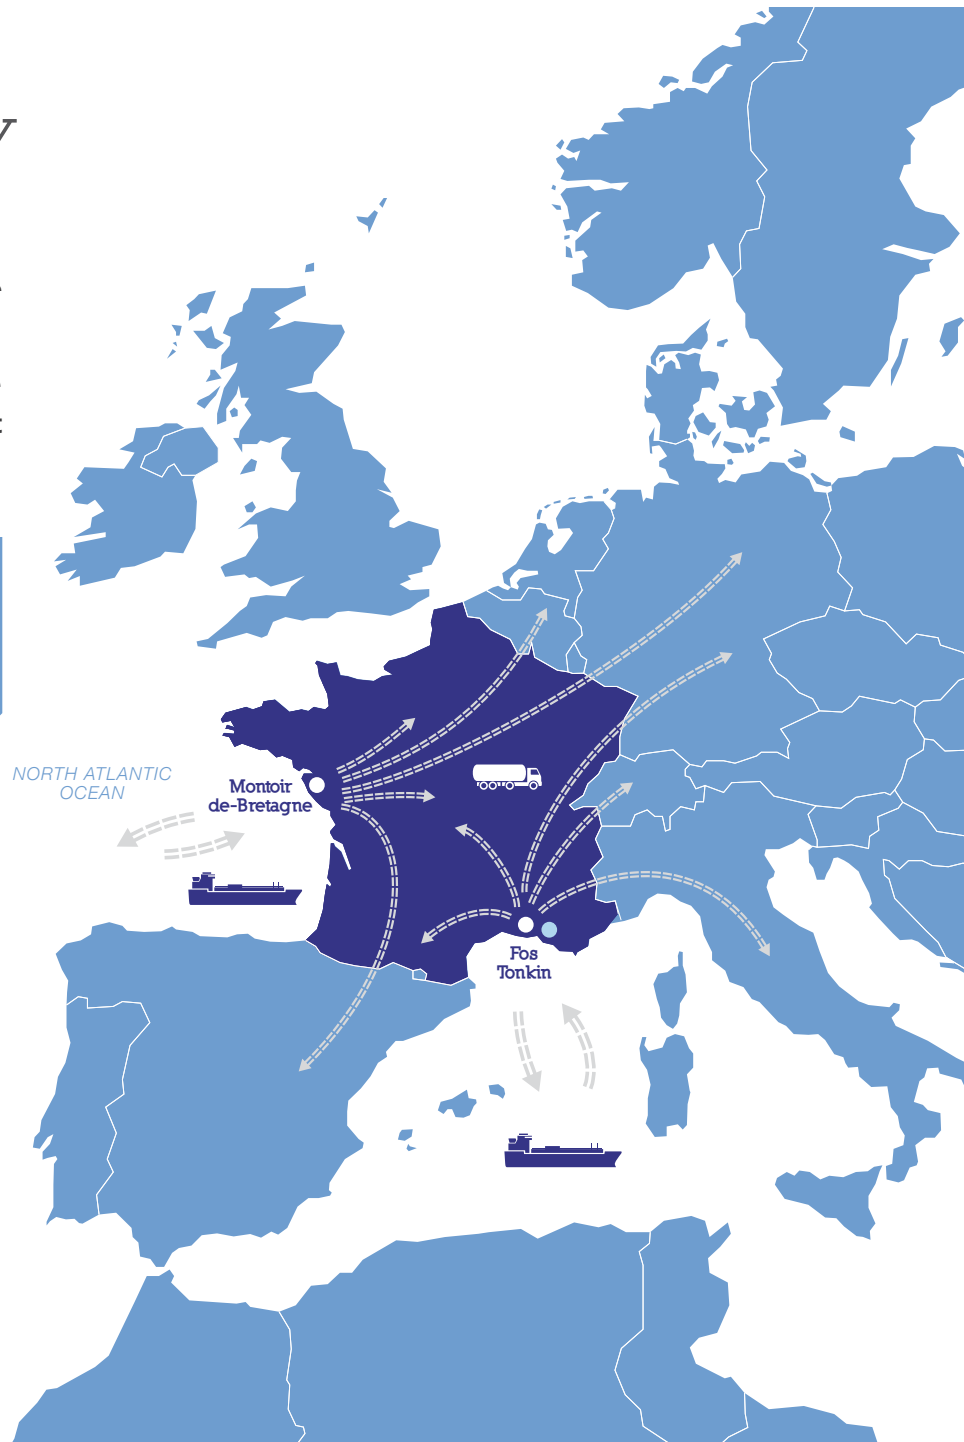

as helping to make it more accessible by offering a truck loading service.

From our terminals, it is possible to reach the whole French market and beyond.

Elengy terminals also have possibility to develop LNG connections by rails or by river or sea.

Truck loading station

OUR OFFER

Following the rapid growth of small-scale LNG market, we have developed a service of loading of LNG roadtrailers and ISO containers in our terminals. Our terminals continuously work on increasing our truck loading capacities. To accompany your business and logistics, our terminals offer the possibility to unload small-scale LNG carriers (less than 20 000m³). We also propose training sessions about LNG and safety dedicated to drivers and operation teams.

HOW IT WORKS

The service is available on a first booked, first served basis. You'll need to buy LNG from one of the terminals' suppliers ahead of the loading date.

All service conditions are available on our website.

Please remember that in order for us to make sure that loading operations can be carried out with the highest safety standards, we need to check and approve roadtrailers before they are filled for the first time. We also offer an optional, pre-loading trailer cooldown service.

Truck loading operation on the Montoir-de-Bretagne LNG terminal

OUR FACILITIES

→ Up to 16 trucks can be loaded each day, 12 in Montoir-de-Bretagne and 4 in Fos Tonkin,

→ Loading stations fitted with flexible hoses,

→ Loaded LNG weighed by weigh bridge,

→ Loading operations run by Elengy's teams.

We're currently considering increasing loading capacity, in Montoir-de-Bretagne and in Fos Tonkin, depending on activity development.

We are eager to hear about your LNG truck loading requirements and talk about how best we can help.
